IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of generating a network name for a base station in a wireless network, comprising:
selecting <u>during manufacturing of the base station</u> an individual network name for the base station,
assigning <u>during manufacturing</u> said individual network name as the default network name of the base station, and
providing <u>during manufacturing</u> the base station with a marking from which said network name can be read.

2. (Original) A method as claimed in claim 1, comprising:
generating the network name for the base station based on an individual serial number of the base station.

3. (Original) A method as claimed in claim 1 or 2, comprising:
printing the network name on the base station or on a sticker or the like to be fastened to the base station.

4. (Original) A method as claimed in any one of claims 1 to 2, comprising:
reading the network name from the base station, and
inputting said network name in a terminal to be coupled to the network.

5. (Currently Amended) A base station in a wireless network, the base station comprising:
means for communicating with a terminal on a radio channel, the terminal and the base station having a common network name, which <u>has been</u> selected and assigned to the base station <u>during manufacturing</u>, and
a marking from which said network name <u>assigned to the base station during manufacturing</u> can be read.
